**We present the ARphymedes
Open Online Course**

**An opportunity to make full use of all our
resources**

How about a free course to learn how to use the ARphymedes educational toolkit?

Yes, because we really did it!

We have worked hard to make all our resources accessible from time to time.

The ARphymedes project will disrupt the way people learn Physics through interesting content made interactive through the use of Augmented Reality.

Based on the teacher training programme developed during recent months, we have set up a new learning environment, an Open Online Course.

The Online Course aims to introduce all the features of the resources developed in the course of the project, such as the Student Book, the Teacher book, and inside you will find downloadable materials such as the smartphone app and try out for the first time the use of Augmented Reality through trigger images.

The course will also allow you, once completed, to receive a Certificate attesting to your knowledge of the entire ARphymedes education toolkit, with the possibility of being able to disseminate and use these resources in your school contexts.

How would you like to take a look and dive into the new dimensions of Physics?
